

## Key Benefit LIMS Eusoft.Lab Cloud

Eusoft.Lab Cloud allow the company to access the LIMS directly from the Web as SaaS (Software as a Service) paying a monthly fee to use the service based on the number of users. This means not having to pay the costs for the initial purchase of the license or for the purchase and maintenance of the hardware infrastructure and not having to worry directly of the back-up and update of the system. The company can concentrate itself exclusively on its own business and on the improvement of its productivity.

If you want to reduce the initial investment and the time to market, if you need simplicity and high scalability at low cost, or if you don't have IT specialized figures, Eusoft.Lab Cloud is the ideal solution for you.

### Simply, fast and scalable

Eusoft.Lab Cloud is based on a logic of simplicity and flexibility. It is specifically designed for organizations that need to use a simple LIMS system, easy to implement and effective in responding to the changing needs of the organization. Eusoft.Lab Cloud is immediately activated and can be used through a common internet connection, without needing servers, software and all the tools needed for the installation of an in-house LIMS. As the needs of the laboratory change you can turn on or off at any time new users, new features, storage space, etc... or also decide to switch to On Premises. All while maintaining the existing configurations.

### Reduced startup costs and fast return of investment

With Eusoft.Lab Cloud companies are not forced to invest resources in the purchase and maintenance of technological infrastructure. All hardware and software resources needed for the operation of the service shall be made available by the supplier. This, together with the speed of implementation and the cost reduction of activation costs, allows a ROI (Return Of Investment) certainly faster than an in-house system.

### Constantly updated version

Eusoft.Lab Cloud is a Software as a Service (SaaS) solution, which always guarantees to all clients to use the latest version available. Whenever new features are released, the application is automatically updated to all customers. This means no downloading updates, no installation work by the customer. The version used is always the latest available. It's all included in the service fee.

## Accessible costs

To use Eusoft.Lab Cloud is expected to pay a monthly fee based on the number of users and the customer pays only for what he uses. The fee includes support and maintenance, so will no longer need to purchase separate maintenance fee. With Eusoft.Lab Cloud also small laboratories that very often don't have IT skills and the budget required to develop LIMS owners can afford the use a LIMS technologically and functionally among the most advanced in the global market. Eusoft.Lab Cloud is also suitable for larger company that want to reduce the costs of information management system and the time to market and want to innovate their IT strategies, or which are looking for low cost solutions to support geographically dispersed location or new acquisitions.

## Security and privacy of data

Eusoft recognizes the value of data and the importance to providing a constant and safe service, for this reason it uses the cloud computing infrastructure Windows Azure from Microsoft. Microsoft has a more comprehensive approach than any other company in relation to European laws on security and data protection. The Windows Azure platform services are offered to customers through a network of global data centers, comply with industry standard ISO/IEC 27001:2005, designed to run 24hours on 24, 7 days out of 7 and with the use of several measures to protect operations from any interruption. Eusoft in its Cloud Computing contracts strictly specifies Service Level Agreement (SLA) with which is committed to ensure functionality, usability of resources and maximum availability time of applications.

## Option to switch to on-premise at any

If you choose to use the application as cloud you need to ask yourself some basic questions: does the application ensure the flexibility to upgrade to on-premise in the case that it becomes necessary to return the data in-house? have the versions locally and on-demand / cloud system the same appearance and the same functioning?

With Eusoft.Lab you can switch from SaaS to on premise any time, and vice versa, because they are basically the same product. This means having the same user experience for both modes and ease of migrating data from one mode to another. We are also able to create hybrid solutions to give you exactly what you need.

## Key benefit

- 
- No initial cost of license
  - No hardware to install and manage
  - High scalability
  - Immediate activation of the service
  - Support already included in the fee
  - System security with higher standard because borne by the service provider.
  - No need for IT staff dedicated to maintenance and support. CIO (Chief

Information Officer) can deal with strategic business decisions closely with business lines

- Updates directly from the vendor at no cost
- Backup made by the service provider
